# Deluge

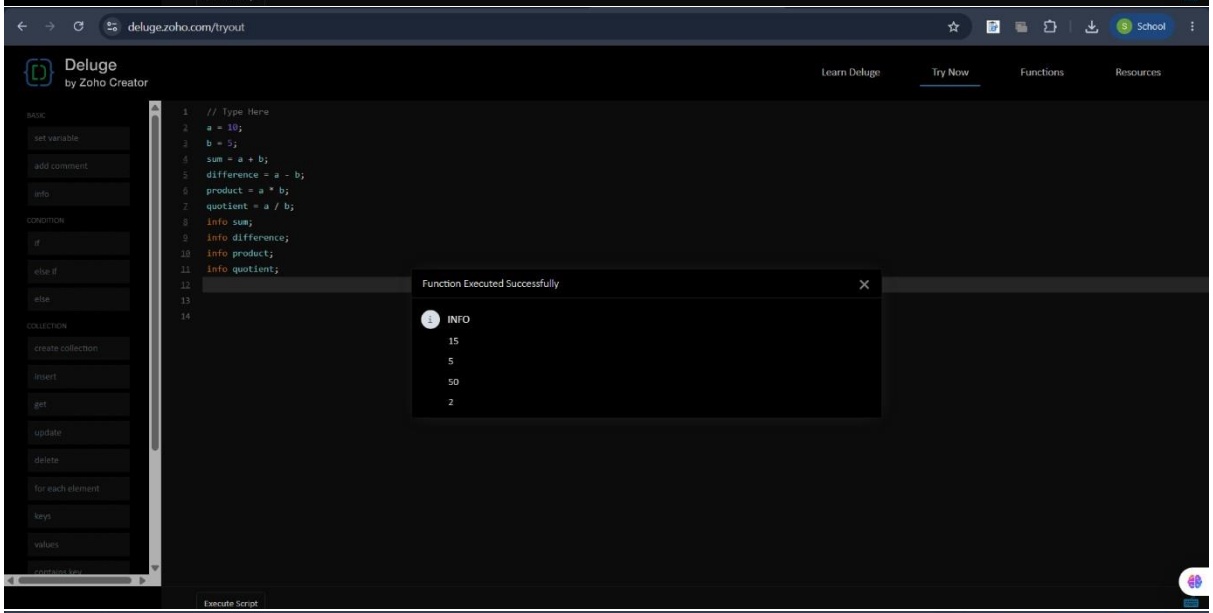

## Aim

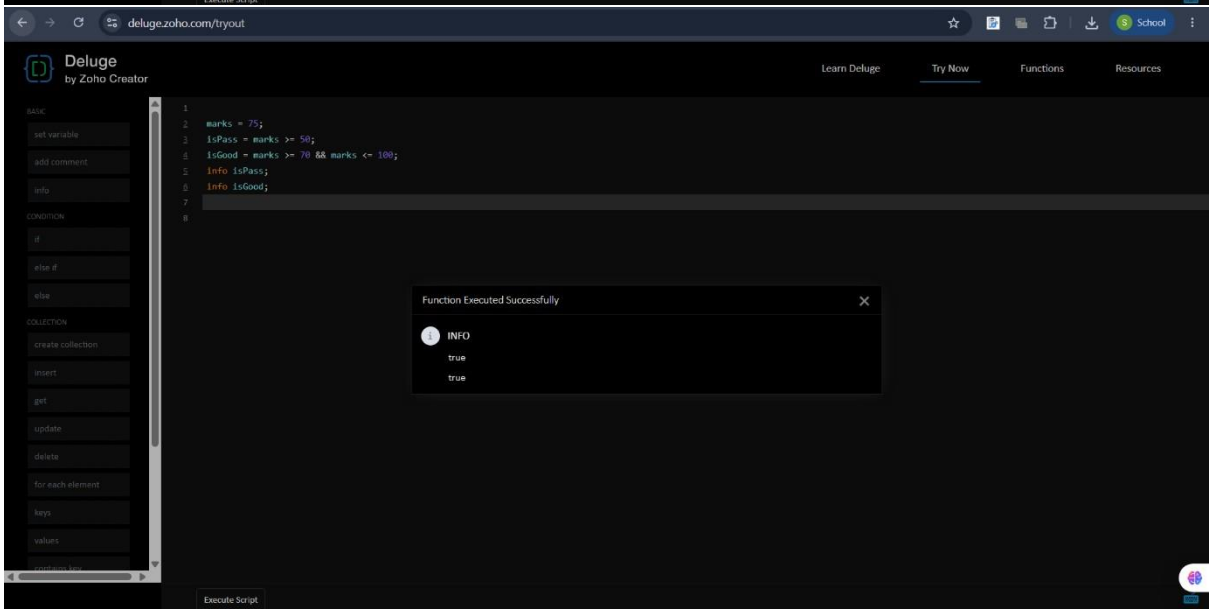

To study and implement basic **Deluge scripting programs** in Zoho Creator using variables, data types, operators, conditions, lists, maps, strings, and type conversion.

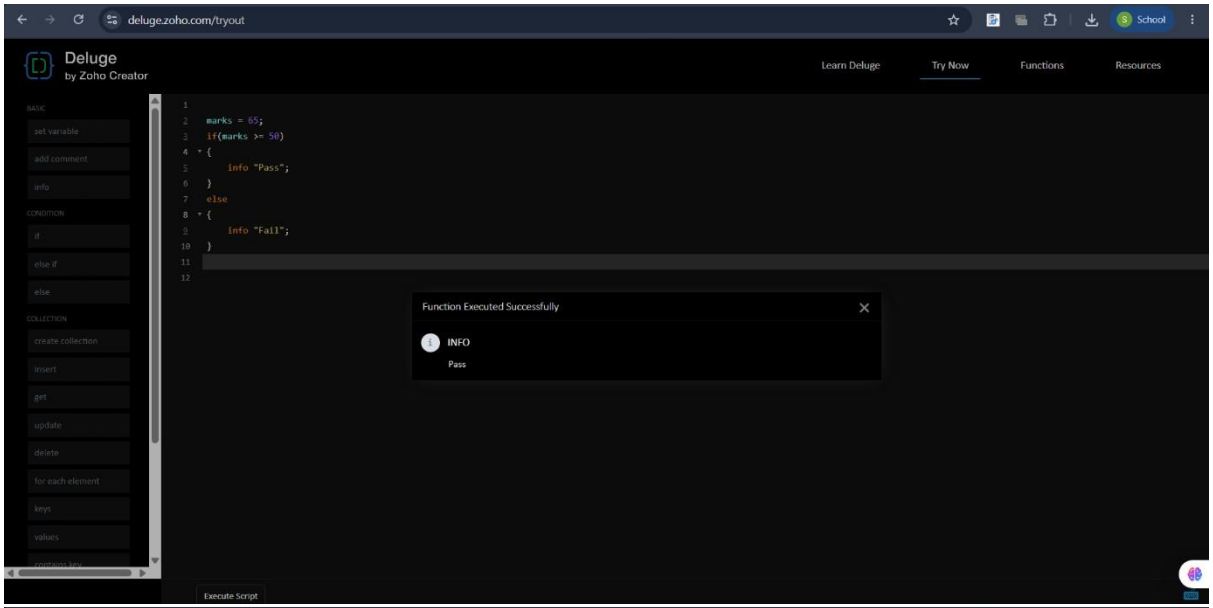

## Procedure

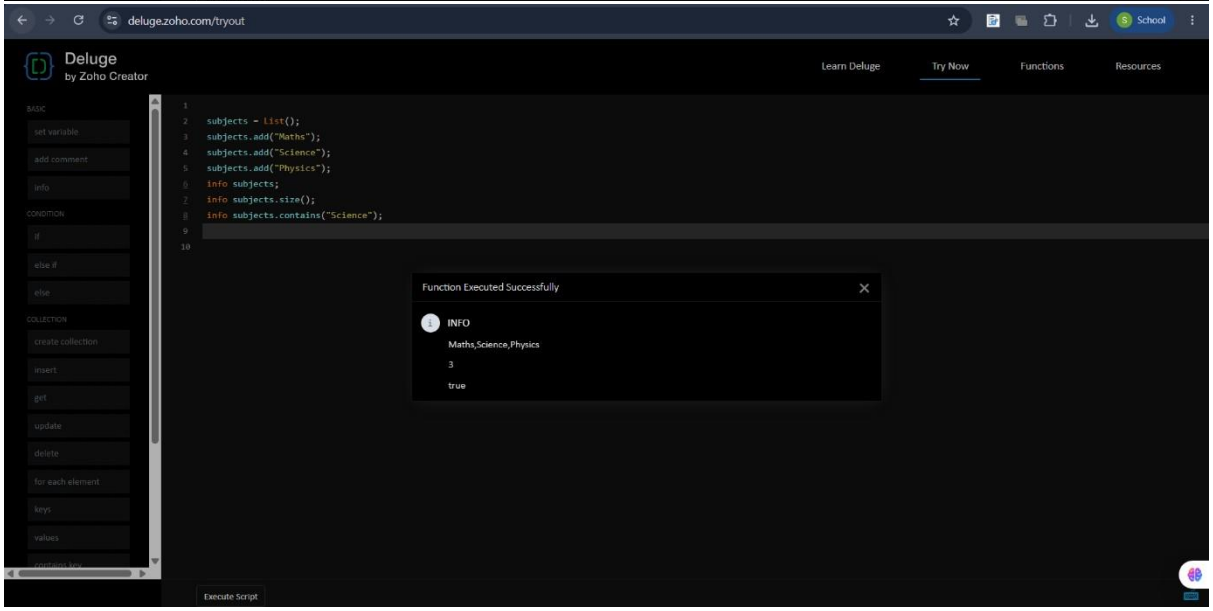

1. Create a new application in Zoho Creator.
2. Create a form with suitable fields such as Name, Quantity, Price, Email, and Date.
3. Open the form's Workflow or Actions section and select Deluge Script. 4. Write and execute Deluge statements using different built-in functions.
5. Test each function by entering sample values in the form.
6. Verify the output and save the application.

## RESULT:

Thus, ten Deluge functions were successfully implemented and demonstrated in Zoho Creator for performing various text, numeric, and data validation operations.
